

Kennel Cough

Kennel Cough has appeared again in the Flyball world. If you notice your dog coughing please take them to a vet. If your dog has Kennel Cough it is **COMPULSORY** for your dog and others living with your dog to stay away from Flyball for 14 days **AFTER** the last signs have disappeared.

This will reduce the number of outbreaks we get. Other precautions are also recommended. Ensure that when your dog gets their annual vaccinations that they get a C5. This covers them for Kennel Cough. It is not 100% guaranteed but will lessen the severity if they do get it.

We also try to wash the tennis balls after each training session. There is disinfectant in the shed. If you have a spare minute after training, please wash the balls and spread them out on the bread crates to dry.
